

NOTICE OF SAFE TRAVERSAL

This document is a statement in keeping with the recommended practices of the International Coalition for Interoperability and Logistical Privacy.

As international crossings have become a hotspot for extralegal behaviour by authoritarian governments seeking to confiscate trade secrets, information about dissidents, journalistic sources and other items that are rightly kept private, the International Coalition for Interoperability and Logistical Privacy has begun urging writers, dissidents, businesspeople and others to protect their sources.

Accordingly, the master password on the device being carried by the bearer has been changed in such a way that no single person has the full password string.

A receiving or hosting party at the destination has roughly one third of the password string in their possession and will give it to the traveling party, pending their safe arrival at the destination -- that is to say, long after leaving the airport or other port of entry.

Similarly, a party at the source of travel has roughly one third of the password string in their possession.

Finally, the traveler has roughly a third of the password string in their possession. That partial password string is written below:

The partial password above is the only information that the traveling party has in their possession.

By signing below, the traveler certifies that they are using this document in good faith and are not concealing activity of a harmful nature.

Written name of traveler:

Dated signature of traveler:

As described above, this template may be used to protect trade secrets, journalistic sources or other information for which confidentiality is legitimately needed.

It is recommended to travellers that this printed, signed document be stored privately and only be furnished if a password for a device is requested.
